

The XXXIV International School of Hydraulics, 11-14 May 2015, Żelechów, Poland

Heidi M. NEPF

Heidi Nepf is the Donald and Martha Harlemann Professor of Civil and Environmental Engineering at the Massachusetts Institute of Technology (MIT). She earned a BS in Mechanical Engineering from Bucknell University ('87) and a PhD in Civil Engineering from Stanford University ('92). She was selected for a Post-Doctoral Scholar Fellowship at the Woods Hole Oceanographic Institution (1992-93), where she studied the estuarine dynamics. She is internationally known for her work on the impact of vegetation on flow and transport in rivers, wetlands, lakes and coastal zones, and she has 80+ peer-reviewed papers in top engineering journals. In recognition for this work, she was awarded a US National Science Foundation Career Award. Dr. Nepf served on the National Research Council review of the Army Corps plans for restoration and protection of the Louisiana coastline. She is a member of the Fluid Mechanics Steering Committee of IAHR and has served or is serving on the editorial boards of *Limnology and Oceanography*, *Water Resources Research*, *Environmental Fluid Mechanics*, and *Journal of Hydraulic Engineering*.
